II.E.5. Plan general de explotación de las unidades y proyección de insumos y productos anuales de una de las unidades agrícolas típicas a crear mediante el proyecto, hasta que la misma alcance su pleno desarrollo.

La explotación de las unidades que se proponen para la colonización y las destinadas a la adecuación de los predios de regadío ha sido concebida bajo los lineamientos generales que se detallan:

Huertas de 10 Ha

Se considera que las labores culturales de nivelación de suelos, arada y rastreada se realizarán con máquinas cooperativas, mientras que las restantes tareas serán efectuadas por el productor en forma manual o con equipos de tracción a sangre, tomando en cuenta que el reducido tamaño de la superficie ^{que} se cultivará de cada una de las variedades propuestas, no haría rentable su explotación con grandes maquinarias.

II. E. 5. (2)

Se considera que a partir del 5º año el productor está en condiciones de ir adquiriendo implementos mecanizados de reducido tamaño que son los técnicamente apropiados para las explotaciones en huerta.

La comercialización de los productos obtenidos en la huerta podrá realizarla el productor en forma directa o a través de la cooperativa, que estará en condiciones de ejecutar los estudios correspondientes para la colocación de los productos o al menos, podrá obtener del organismo ejecutor todo el asesoramiento correspondiente.

En los cuadros Nos. 2 a 11 del punto II.E.6. se especifican los requerimientos de mano de obra para esta unidad agraria con discriminación mensual. En el cuadro siguiente se observa los insumos de mano de obra para cada huerta de 10 Ha en forma resumida.

| <u>Años</u> | <u>Insumo de mano de obra</u> |
|-------------|-------------------------------|
| 1966 | 647,3 707,3 |
| 1967 | 667,3 |
| 1968 | 667,8 |
| 1969 | 584,5 |
| 1970 | 542,0 |
| 1971 | 664,2 |
| 1972 | 585,2 |
| 1973 | 586,2 |
| 1974 | 603,2 |
| 1975 | 583,5 |
| Promedio | 603,1 |

Del cuadro anterior se desprende que la Huerta de 10 Ha puede ser atendida por una familia de productores con el agregado de jornales alquilados para la época en que se producen los picos de demanda. La familia puede calcularse que realizará 500 jornales anuales por cuanto dos de sus miembros son considerados trabajadores rurales con un promedio de 250 jornales.

Para proyectar la producción de cada una de las huertas de 10 Ha se ha elaborado el Cuadro N° 1:

II. E. 5. (4)

Huerta de 15 Ha

Para la huerta de 15 Ha se ha pensado que los trabajos culturales deben realizar en igual forma que las propuestas para las huertas de 10 Ha.

En los Cuadros N° 12 al 21 del punto II.E.6 se detallan los requerimientos de mano de obra para la huerta de 15 Ha con discriminación mensual en un período de 10 años. Sus síntesis se detalla a continuación:

| <u>Años</u> | <u>Insumo de mano de obra</u> |
|-------------|-------------------------------|
| 1966 | 858,47 |
| 1967 | 802,13 |
| 1968 | 802,13 |
| 1969 | 796,13 |
| 1970 | 813,80 |
| 1971 | 783,97 |
| 1972 | 773,38 |
| 1973 | 785,38 |
| 1974 | 803,38 |
| 1975 | 827,38 |
| Promedio | 804,61 |

Del cuadro precedente se deduce que la huerta de 15 Ha puede ser atendida por una familia de productores con el agregado de jornales alquilados para la época en que se producen los picos de demanda.

Se ha calculado que una familia realiza anualmente 500 jornales teniendo en cuenta que dos de sus integrantes son considerados trabajadores rurales con un promedio de 250 jornales cada uno. En el Cuadro N° 2 se ha proyectado la producción de una huerta de 15 Ha.

En el cuadro de producción de las huertas de 10 y 15 Ha, en la columna correspondiente a lo consumido en la chacra solamente se ha estipulado los consumos mayores, es decir el consumo de forraje por animales. El consumo familiar de los productos producidos en la huerta no se ha descontado considerando que los rendimientos establecidos para cada uno de los cultivos tienen su fuerte margen de variabilidad para absorber el consumo familiar.

Chacra de 20 Ha

Para este tipo de parcelamiento destinado a la cría de ganado vacuno para la producción de leche se ha previsto que las labores culturales en su gran mayoría serían realizadas con maquinarias cooperativas ya que las superficies cultivadas hacen que los trabajos realizados en forma manual o

II. E. 5. (6)

a tracción de sangre sean antieconómicos. Sin embargo se ha proyectado una pequeña huerta familiar la que será trabajada en forma manual.

En los Cuadros N° 22 a 31 del punto II.E.6 se detallan los requerimientos mensuales de mano de obra con una proyección de 10 años. Resumidamente es como sigue:

| <u>Años</u> | <u>Insumo de mano de obra</u> |
|-------------|-------------------------------|
| 1966 | 1.300,50 |
| 1967 | 844,50 |
| 1968 | 844,50 |
| 1969 | 856,50 |
| 1970 | 1.156,50 |
| 1971 | 1.000,50 |
| 1972 | 844,50 |
| 1973 | 844,50 |
| 1974 | 1.144,50 |
| 1975 | 844,50 |
| Promedio | 968,10 |

La chacra tampera proyectada exigirá tres personas en forma permanente y jornales alquilados en los meses que se producen los picos de demanda.

Al cuadro de insumo de mano de obra para la chacra de 20 Ha, pertenece agregar la parte proporcional de mano de obra que le corresponde por

el puestero encargado de la atención en común de 4 campos de apoyo de 200 Ha cada uno.

La producción para esta chacra se detalla en el cuadro N° 3: se ha estipulado que las $\frac{1}{2}$ Ha de alfalfa serán utilizadas íntegramente para el forraje de la hacienda, el maíz se cosechará, y en sus rastrojos se alimentará el ganado y en la misma forma se procederá con el kafir. El sorgo negro cuyo cultivo se realiza en secano y está destinado al mejoramiento de las pasturas naturales, se utiliza como forraje para la hacienda que no está en producción.

Chacra de 25 Ha

También para este tipo de chacra se ha concebido que las tareas culturales se realizarían en forma mecánica y solamente lo destinado a la huerta familiar y algunas tareas menores se realizaría en forma manual.

En los cuadros N° 32 al 41 del punto II.E.6 se detallan las necesidades de mano de obra mensual a través de 10 años cuyo resumen es el siguiente:

II. E. 5. (8)

| <u>Años</u> | <u>Insumo de mano de obra</u> |
|-------------|-------------------------------|
| 1966 | 1.422,75 |
| 1967 | 1.205,00 |
| 1968 | 1.205,00 |
| 1969 | 1.328,50 |
| 1970 | 1.286,00 |
| 1971 | 1.326,50 |
| 1972 | 1.132,00 |
| 1973 | 1.138,00 |
| 1974 | 1.272,50 |
| 1975 | 1.282,50 |
| Promedio | 1.259,87 |

Puede observarse que serán necesarios tres obreros rurales por chacra, con alquiler de jornales para cubrir las necesidades de los picos de demanda de mano de obra.

En el cuadro N° 4 se refleja la producción para esta parcela.

Chacra de 35 Ha

Los trabajos culturales de esta chacra se realizarán en forma mecanizada siguiendo los lineamientos generales de lo proyectado para la chacra de 25 Ha.

En los cuadros N° . 42 al 51 del punto II.E.6. se detalla los insumos mensuales de mano de obra proyectada durante 10 años para esta unidad agraria cuyo resumen resulta:

| <u>Años</u> | <u>Insumo de mano de obra</u> |
|-------------|-------------------------------|
| 1966 | 2.065,50 |
| 1967 | 1.860,50 |
| 1968 | 1.860,50 |
| 1969 | 1.884,50 |
| 1970 | 1.970,00 |
| 1971 | 1.949,00 |
| 1972 | 1.787,50 |
| 1973 | 1.792,50 |
| 1974 | 1.824,50 |
| 1975 | 1.795,50 |
| Promedio | 1.878,95 |

La producción para esta chacra se sintetiza en el cuadro N° 5.

Chacra de 50 Ha

Para este tipo de chacra se ha previsto la mecanización total de las tareas culturales de la misma.

II. E. 5. (10)

En los cuadros N° 52 al 61 del punto II.E.6. puede observarse la discriminación mensual de los insumos de mano de obra requeridos en una proyección de 10 años cuyo resumen es el siguiente:

| <u>Años</u> | <u>Insumo de mano de obra</u> |
|-------------|-------------------------------|
| 1966 | 2.876,00 |
| 1967 | 2.590,50 |
| 1968 | 2.590,50 |
| 1969 | 2.623,50 |
| 1970 | 2.554,25 |
| 1971 | 2.718,50 |
| 1972 | 2.479,50 |
| 1973 | 2.488,50 |
| 1974 | 2.536,50 |
| 1975 | 2.500,50 |
| Promedio | 2.595,82 |

La producción de la chacra de 50 Ha se especifica en el cuadro N° 6.

Analizando los cuadros ~~precedentes~~ puede deducirse que en líneas generales los planes de explotación de las unidades propuestas están basadas en una mecanización inicial de los trabajos culturales, la tecnificación general de los procesos agrícolas, mejoramiento de suelos, asistencia técnica a los beneficiarios con lo que se tiende a superar los rendimientos previstos.

II. E. 6. Análisis de insumo de
mano de obra requerida para la
explotación del lote.

En las unidades agrarias propuestas para la colonización y adecuación de los predios de regadío, se ha considerado que gran parte de los trabajos se realizarán mecánicamente, especialmente en las chacras de 20, 25, 35 y 50 Ha. En las huertas de 10 y 15 Ha la mecanización agraria alcanzará solo parte de las tareas, reduciéndose a arada, rastreada y nivelación de los suelos.

Estas consideraciones deben tenerse presente al analizar el insumo de mano de obra requerida para las explotaciones de las parcelas.

En los cuadros N° 5,2 a 6,1 se detallan los requerimientos de mano de obra para cada una de las unidades agrarias propuestas analizadas anualmente.

En el cuadro N° 1 se han resumido los requerimientos globales considerando la cantidad de parcelas proyectadas.

Puede advertirse que la primera etapa de eje

II. E. 6. (2)

cución requiere 3.170.788 jornales por año, que considerando un promedio de 250 días de trabajo por persona son necesarias 12.683 obreros rurales para realizar las labores culturales en los predios rurales.

Debe señalarse que solamente se consideraron los insumos de mano de obra en huertas y chacras para la primera etapa de ejecución del Proyecto, siendo contemplados los requerimientos de mano de obra para las industrias, comercio, y demás, en el punto II. C.

Estimación de las inversiones y necesidades anuales de crédito en cada unidad agrícola

Las inversiones necesarias y la financiación prevista para las mismas se ha desarrollado en detalle en el punto IV 1.

En los cuadros Nros 1, 3, 5, 7, 9 y 11 del punto IV 1, se ofrece un panorama de las necesidades de inversiones y gastos para cada huerta de 10 Ha y 15 Ha; chacras de 20, 25, 35 y 50 Ha. En los cuadros Nros 14 y 15 del punto IV 1, pueden apreciarse las necesidades totales de inversión y gastos requeridos por el total de huertas y chacras previstas para la primera y segunda etapa.
